

Math 8: Chapter 2 Concept Check #1-5

Name:

Date:

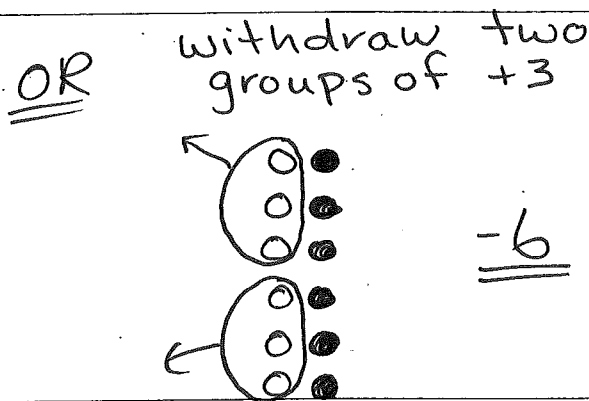

Period:

#1 - Model the process of multiplying integers	#2 - Solve a given problem involving multiplication of integers without the use of technology	#3 - Model the process of dividing integers	#4 - Solve a given problem involving division of integers without the use of technology	#5 - Use order of operations to evaluate equations with integers

1) A) Model  $(+8) \times (-3)$  using a number line.

1) B) Model  $(-2) \times (+3)$  using a number line.

2) A) Find the product of  $(-6) \times (-8)$

+48

B) Find the Product of  $(+2) \times (+11)$

+22

3) A) Model  $(-18) \div (+3)$  using a number line

$(+3)$  = forward steps  $\therefore$  facing negative  
 $\therefore$  answer is negative

$-6$

B) Model  $(+18) \div (+6)$  using a number line.

$(+6)$  = forward steps  
 $\therefore$  facing pos.  
 $\therefore$  answer is pos.

$+3$

4) A) What is the quotient of  $(-35) \div (+5)$ ?

$-7$

B) What is the quotient of  $(-16) \div (-4)$ ?

$+4$

5) A) Evaluate. Work down the page. Show all steps.

$$\frac{14 - 10 \div 2}{-3}$$

$$= \frac{14 - 5}{-3}$$

$$= \frac{9}{-3}$$

$$= -3$$

b) Evaluate. Work down the page. Show all work.

$$(-20)(-5) + 16 \div (-8)$$

$$+100 + 16 \div (-8)$$

$$+100 + (-2)$$

$$+98$$
